Participant Questionnaire

We are conducting a study on how different auditory experiences (soundscapes) affect taste perception and smoking desire. This sheet provides information about the study and what participation involves.And in the part 2 it includes several questions for you. Please read it carefully if you would like to take part. If you have any further queries, please contact any of us:

What is the study about?

This study is a part of the course DM2601 at KTH. We are conducting a quantitative experiment to understand the effects of cross-modal auditory intervention on smoking desire and taste perception. During the experiment, you will be asked to listen to various sound sequences through headphones while using a provided nicotine-free, tobacco-flavored e-cigarette. You will then fill out a questionnaire evaluating your taste perceptions, desire to smoke, and comfort levels.

Participation and Withdrawal

Participation in this study is entirely voluntary. You must be a regular smoker with over a year of smoking history, have normal hearing, no serious respiratory diseases, and have not eaten or smoked within one hour prior to the experiment. You should feel free to ask for clarification or information throughout. You may also withdraw at any point prior to, during, and up to one week after the experiment without giving a reason. If you withdraw, any data collected from you will be destroyed.

What will happen to the information you provide?

We will treat any information you provide carefully. In accordance with the EU's GDPR, any personal information, such as your name, will be stored in a secure location. Electronic data (such as your questionnaire responses) will be stored on a secure, password-protected computer.

We will not pass personal information to others. The raw data will be treated with confidentiality and will only be accessible to the research team and the teachers of the course. Any information shared beyond this team in research publications, presentations, or teaching will be completely anonymized using pseudonyms and aggregated data.

What are the possible risks and benefits of taking part?

Because the study involves playing sounds specifically designed to test physical and semantic discomfort (e.g., low-frequency noises), you may experience mild, temporary auditory discomfort or unpleasant taste associations. You will also be inhaling from a nicotine-free e-cigarette. If you feel that any aspect of the auditory experience or the experiment is uncomfortable, you can remove the headphones or stop participating at any time. While there are no immediate direct benefits to you, your participation will contribute to research on potential acoustic interventions for smoking cessation products

1。 **Consent Declaration**

请选择所有适用项。

- [ ] I confirm that I have read and understood the information sheet for the above study.
- [ ] I confirm that I meet the screening criteria (regular smoker for >1 year, normal hearing, no respiratory issues, have not smoked/eaten in the past hour).
- [ ] I understand that my participation is voluntary and that I am free to withdraw at any time without giving a reason.
- [ ] I agree to take part in the above study.
